

# Notice of Environmental Assessment Activities

The initial investigation will include the following activities:

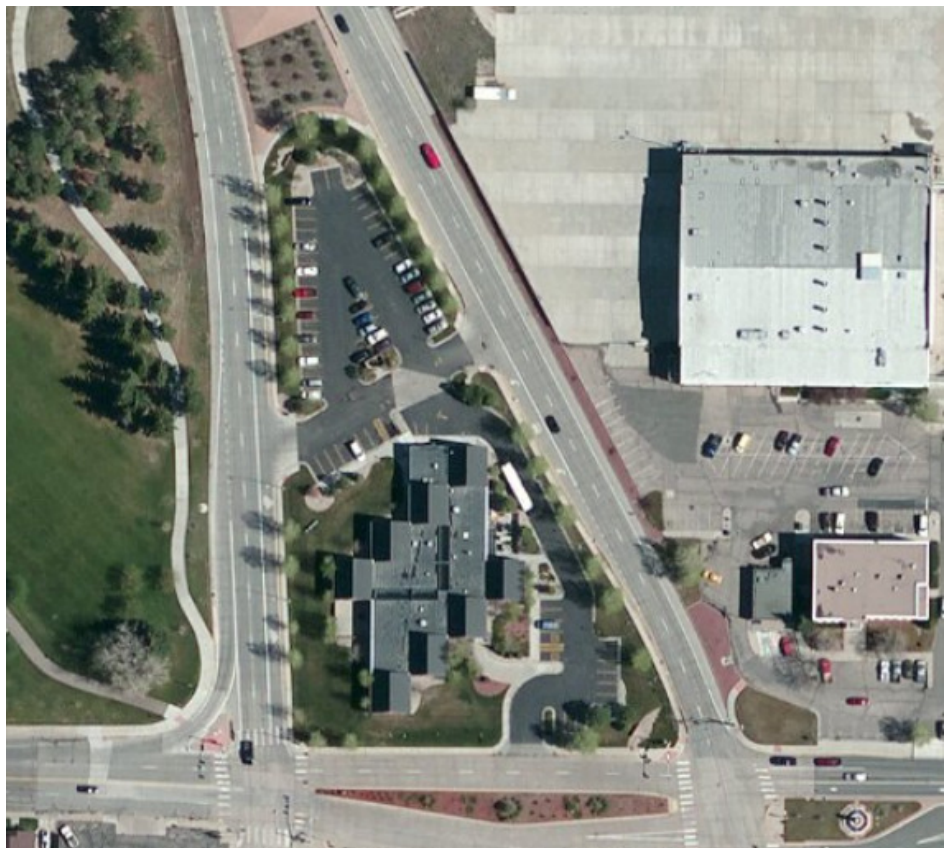

- ⇒ Installation of temporary borings and collection of soil and groundwater samples
- ⇒ Installation and sampling of permanent groundwater monitoring wells
- ⇒ Installation and sampling of shallow soil vapor monitoring points

*The purpose of this investigation is to determine the extent and nature of PCE in groundwater, soil and soil vapor. The WDEQ/OSRP will determine if cleanup and/or mitigation measures are necessary.*

The Wyoming Department of Environmental Quality, Orphan Site Remediation Program (WDEQ/OSRP) plans to conduct an environmental investigation of the Cheyenne Airport Addition tetrachloroethylene (PCE) plume. The effort is focused on the Blood Systems, Inc. property located at 112 East 8th Avenue. Concentrations of PCE in groundwater have been previously detected at levels exceeding the federal maximum contaminant levels (MCLs). Current conditions of the plume are unknown.
